D-ONE IMPLANT LINE

BENDABLE ONE-PIECE IMPLANT
WITH COMPRESSIVE THREADS

Dental Tech

New D-One Implant System.

One-piece implant with compressive threads

With **over 40 years of experience** in the biomedical and dental implantology area, Dental Tech is an established and constantly growing company in Italy and abroad and specializes in the design, production and distribution of dental implants. In order to satisfy any clinical need, the implant line available to professionals is very wide and includes conical and cylindrical implants; with internal and external connection; transmucosal and submerged implants; short implants and one-piece implants.

Soon, Dental Tech's product range will further expand with **D-ONE implant**.

- **One-piece implant** with compressive threads used for multiple unit restorations with immediate loading in the upper and lower jaws, to provide an anchor for prosthetic superstructures for dental restorations.
- It can be used in combination with others implants and allows for simplified positioning and prosthetic procedure, both with flap and with flapless technique.
- It can also be used as a final or intermediate abutment for fixed or removable bridges and to hold dental prostheses.
- Abutment direction can be adjusted up to **15°** relative to the implant axis, ensuring the desired prosthetic parallelization, but also allowing to take advantage of the adjacent stable bone structures.
